

University Mathematics Crash Course

Delivered by Adriel Ong MS Mathematics, Open University

February 19, 2021

This course aims to prepare students for graduate studies in Mathematical fields, or professions with Mathematical content. The content covers a standard university Mathematics curriculum, with selected additions. This course would benefit students going into the following fields:

- Mathematics
- Physics
- Computer Science
- Economics
- Statistics
- Data Science
- Engineering

Course content is structured into 16 weeks, with 5 hours every week. It is recommended to take this course with no other academic obligations. This course also assumes knowledge of elementary algebra and trigonometry.

1 Set Theory, Formal Logic, Countability, and the Axiom of Choice

- Truth values
- Rules of inference

2 Linear Algebra

- The Determinant
- Vector Spaces

3 Real Analysis

- $\varepsilon - \delta$ proving

4 Multivariable Analysis

5 Point-set Topology

6 Analysis on Manifolds

7 Differential Forms

8 Differential Geometry

9 Elementary Geometry

10 Complex Analysis

11 Abstract Algebra

12 Measure Theory and Lebesgue Integration

13 Fourier Analysis

14 Differential Equations

15 Probability Theory

16 Algorithms
